

Pattern of Adverse Events: The Use of Box plot

Jui-Fu Huang, Shire, Cambridge, MA

ABSTRACT

Box plot is used as a simple way to display the distribution of numerical data through their quartiles. In order to recognize if certain adverse events occur faster than the others after being treated with study product, this paper will use box plot as a quick and easy way to present such pattern. Furthermore, the use of time-based box plot on other areas will also be discussed in the paper.
